Problems On Trains-I

1. A train running at a speed of 72 km/hr crosses a pole in 20 seconds. Find the length of the train?
2. A train running at the speed of 60 km/hr crosses a pole in 9 seconds. What is the length of the train?
3. Find the length of the platform if the 250m long train runs at 90 km/hr and cross the platform in 30 seconds?
4. A train takes 10 sec to pass a signal post and covers a distance of 10 km in 15 min. Find the length of train?
5. A train of length 240 meters crosses a pole in 12 seconds. In what time it will cross a platform of length 400 meters?
6. A train passes two bridges of length 800m and 400 m in 100 seconds and 60 seconds, respectively. Find the length of the train?
7. A train travelling at a speed of 45 km/hr. If it crosses a signal pole in 18 seconds, how much time will it take to cross a 125m long platform?
8. A train passes a platform in 42 seconds and a man standing on the platform in 25 seconds. If the speed of the train is 72 km/hr, what is the length of the platform?
9. A train crosses a Platform of length 99m in 13.5s and a man standing in the platform in 9s. Find the length of the train
10. A train passes a stationary pole in 8 seconds. The train also passes a 200 m long bridge in 28 seconds. What is the length and the speed of the train?
11. A train having length 150 m passes a platform of 550 m length. The time taken for it is 56 seconds. In how much time will this train take to pass the platform of 250 m length?
12. A train moves past a telegraph post and a bridge 264 m long in 8 seconds and 20 seconds respectively. What is the speed of the train?

PRACTICE QUESTIONS:

1. Find the length of the platform if the 300m long train runs at 36km/hr and cross the platform in 50 seconds?
2. A train of length 250 m runs at a speed of 72 km/hr. What will be the time taken to cross any stationary object standing at the railway station?
3. The time in which a train 1800 m long, travelling at the speed of 30 kmph, will pass a signal pole is:
4. A train takes 55 seconds to cross the 204 m long bridge. If the same train takes 21 seconds to cross a signal pole, then what is the length of the train. (In meters)
5. A train passes a station platform in 36 seconds and a man standing on the platform in 20 seconds. If the speed of the train is 54 km/hr. What is the length of the platform?
