Problems On Trains-II

1. Two trains 230 m and 270 m long are running in opposite direction at the speed of 42 km/hr and 48 km/hr., respectively. How much time will they take to cross each other?
2. Two trains with lengths 126 m and 119 m respectively are moving towards each other. Their speeds are 12 m/s and 23 m/s, respectively. What will be the time needed by the trains to cross each other?
3. Two trains, M and N, are running on a parallel tracks in opposite directions with lengths of 110m and 140 m, respectively. Train M is running at a speed of 70km/hr and took 5 seconds to cross a train N. The speed of train N is?
4. Two trains start at the same time from Hyderabad and Delhi and proceed towards each other at 80 kmph and 95 kmph respectively. When they meet, it is found that one train has travelled 180 km more than the other. Find the distance between Hyderabad and Delhi.
5. Two trains of length 200 m and 250 m are running on a parallel rail tracks at the speed of 68 km/hr and 50 km/hr, respectively. In how much time will the faster train cross the slower train if both trains are running in the same direction?
6. Two trains A and B leave Karnataka for Gujarat at 8:00 pm and 8:30 pm respectively and run at 90 km/hr and 120 km/hr, respectively. At what distance from Karnataka, will the two trains meet?
7. A 240 m long train running at a speed of 125 km/hr,In what time will it pass a man running at 17 km/hr in the same direction in which the train is going?
8. Two trains running in opposite directions cross a man standing on the platform in 27 seconds and 17 seconds respectively and they cross each other in 23 seconds. The ratio of their speeds is:
9. Two trains are running at 40 km/hr and 20 km/hr respectively in the same direction. Fast train completely passes a man sitting in the slower train in 5 seconds. What is the length of the fast train?
10. Two trains A and B cross each other while running in opposite direction in half of a minute, if train A running with double of its earlier speed and train B reduces its speed to 50% of its earlier speed, then they again cross each other in the same time while running in opposite direction. Find the length of both trains together, if speed of train - A is 36 kmph. (in m)
11. Two, trains, one from Pune to Andhra Pradesh and the other from Andhra Pradesh to Pune, start simultaneously. After they meet, the trains reach their destinations after 9 hours and 16 hours respectively. The ratio of their speeds is:

PRACTICE QUESTIONS:

1. Stations M and N are 276 km apart. At the exact same time, a train starts from M and other from N towards N and M respectively. These trains meet after 12 hours. The train travelling from M to N is slower by 14 km/hr in comparison to the other train. What is speed of slower train?
2. Two trains are moving in opposite directions at a speed of 60 km/hr and 90 km/hr. Their lengths are 1.10 km and 0.9 km respectively. The time taken by the slower train to cross the faster train in seconds is:
3. Two trains starting at the same time from two stations 200 km apart and going in opposite directions cross each other at a distance of 110 km from one of the stations. What is the ratio of their speeds?
4. A man sitting in a train which is traveling at 50 kmph observes that a goods train, traveling in opposite direction, takes 9 seconds to pass him. If the goods train is 280 m long, find its speed?
