Boats and Streams-I

1. If the speed of the boat is 18 km/hr in still water and the speed of the stream is 5 km/hr then find the speed of boat along the stream?
2. If the speed of the boat is 27 km/hr in still water and the speed of the stream is 12km/hr then find the speed of boat against the stream?
3. A man can row upstream at 26 km/hr and downstream at 36 km/hr. What is the speed of the stream?
4. A swimmer can row upstream at 18 km/hr and downstream at 26 km/hr. What is the speed of the swimmer?
5. A boat can travel with a speed of 13 km/hr in still water. If the speed of the stream is 4 km/hr, find the time taken by the boat to go 102 km downstream.
6. A boat can travel with a speed of 17 km/hr in still water. If the speed of the stream is 5 km/hr, find the time taken by the boat to go 60 km downstream
7. A man's speed with the current is 15 km/hr and the speed of the current is 2.5 km/hr. The man's speed against the current is:
8. A boat running downstream covers a distance of 28 km in 2 hours while for covering the same distance upstream, it takes 7 hours. What is the speed of the boat in still water?
9. The speed of a boat in still water in 17 km/hr and the rate of current is 7 km/hr. The distance travelled downstream in 12 minutes is.
10. A boatman goes 2 km against the current of the stream in 1 hour and goes 1 km along the current in 10 minutes. How long will it take to go 5 km in stationary water?
11. A man takes half time in rowing a certain distance downstream than upstream. What is the ratio of the speed in still water to the speed of current?
12. A man takes 20 minutes to row 12 km upstream which is a third more than the time he takes on his way downstream. What is his speed in still water?

PRACTICE QUESTIONS:

1. A boat can travel with a speed of 12 km/hr in still water. If the speed of the stream is 4 km/hr, find the time taken by the boat to go 64 km downstream.
2. A man's speed with the current is 38 km/hr and the speed of the current is 7.5 km/hr. The man's speed against the current is:
3. A boat running downstream covers a distance of 36 km in 4 hours while for covering the same distance upstream, it takes 9 hours. What is the speed of the stream?
4. The speed of a boat in still water in 21 km/hr and the rate of current is 12 km/hr. The distance travelled upstream in 12 minutes is.
5. A boatman goes 6 km against the current of the stream in 2 hour and goes 4 km along the current in 20 minutes. How long will it take to go 18 km in stationary water?
