1. A is twice as efficient as B and together they can finish a work in 18 days. A alone can finish the work in?
2. A can do 3/4 of a job in 12 days. B is twice as efficient as A. In how many days will B finish the job?
3. Ajay can complete a work in 14 days. Bharath is 75% more efficient than Ajay. In how many days, can Bharath complete this work alone?
4. The work efficiency of A and B are in the ratio 7:13. If together, they can complete a work in 28 days In how many days A alone can do the work?
5. A is twice as good as work as B and B is twice as good as work as C. If A and B can together complete a piece of work in 4 days. Then C do it by alone in how many days?
6. A takes twice as much time as B or thrice as much time as C to finish a piece of work. Working together, they can finish the work in 6 days. B can do the work alone in how many days?
7. Madhan is thrice as efficient as Siva and completes a work in 40 hours less than the time taken by Siva. If both of them work together, the time required to complete that work is?
8. A and B can complete a piece of work in 15 days and 10 days respectively. They together complete the work and received an amount of 70,000. Find the share of A in the amount?
9. A, B and C can do a work in 6, 10 and 12 days, respectively. After completing the work together, they received Rs. 63000. What is the share of B in the amount received?
10. A, B and C contract a work for Rs. 770. Together A and B can do 7/11 of the work. Then how much does C get?
11. P, Q and R are employed to do a work for Rs. 5750. P and Q together finished 9/23 of the work and Q and R together finished 18/23 of the work. Wage of Q in rupees is?
12. A and B have to do 13/15 part of a work together and B and C have to do 11/20th part of the work together. If the difference between the wages of A and C is Rs.7600, then total wages for A, B and C is?

PRACTICE QUESTIONS:

1. To complete a work A takes 50% more time than B. If together they take 18 days to complete the work, how much time shall B take to do it?
2. A is 30% more efficient than B. If together they can complete a work in 39 days, then in how many days A alone can do it?
3. A is thrice as good workman as B and therefore A is able to finish a work in 80 days less than B. In how many days they can complete the work working together?
4. A works twice as fast as B and B works twice as fast as C. All three working together can finish the task in 4 days with the help of D. If D alone can finish the task in 16 days, then in how many days will A alone finish 75% of the task?
