1. A tank can be filled by pipe A in 6 hours and pipe B in 8 hours respectively. How much time will it take for the tank to be filled if both the taps opened simultaneously?
2. Tap P can fill a cistern in 6 hours and tap Q can empty the full cistern in 10 hours. If both taps P and Q are kept open simultaneously, then in how many hours will the empty cistern be completely full?
3. A tank can be filled by pipe A in 5 hours and emptied by pipe B in 8 hours respectively. How much time will it take for the tank to be half full when both the taps are opened together?
4. Tap A can fill a tank in 6 hours, tap B can fill the same task in 8 hours and tap C can empty the same tank in 4 hours. If all three taps A, B and C are opened together, then how much time (in hours) will be taken to fill the tank?
5. A pipe can fill an empty cistern with water in 5 hours. Due to leakage in its bottom, it takes 6 hours to fill the cistern. When the cistern is full, the time (in hours) in which it is emptied due to leakage is?
6. A, B, C are three taps connected to a tank. A and B together fill the tank in 10 hours, B and C together fill the tank in 12 hours, A and C together fill the tank in 15 hours. Then time (in hours) taken by Tap A alone to fill the tank, is?
7. Pipes A and B can fill a tank in 36 hours and 48 hours, respectively. Both pipes are opened together for 9 hours and then A is closed. Pipe B alone will fill the remaining part of the tank now in:
8. Pipes A, B and C can fill a tank in 20, 30 and 60 hours, respectively. Pipes A, B and C are opened at 7 a.m., 8 a.m., and 9 a.m., respectively, on the same day. When will the tank .'be full?
9. 12 pumps workig 6 hours a day can empty a completely filled reservoir in 15 days. How many such pums working 9 hours a day will empty the same reservoir in 12 days?
10. Pipes A and B can fill a tank in 16 hours and 24 hours respectively and pipe C alone can empty the full tank in X hours. All the pipes were opened together at 10:30 Am but C was closed at 2:30 Pm. If the tank was full at 8:30 Pm on the same day, then what is the value of X?
11. Two pipes can separately fill a tank in 20 and 30 hours respectively. Both the pipes are opened to fill the tank but when the tank is 1/3rd full, a leak develops, through which 1/7th of the water supply by both pipes starts leaking out. Find the total time to fill the tank?
12. A leak in the bottom of a tank can empty the full tank in 6 hours. An inlet pipe fill water at the rate of 4 litres a minute. When the tank is full, the inlet is opened and due to the leak the tank is empty in 8 hours. Find the capacity of the tank in Ltrs?
13. Taps are fitted in a tank some are inlet taps and rests are outlet tap. Each inlet tap can fill the tank in 12 hours and each outlet tap can empty it in 36 hours. Find the number of inlet taps if the whole tank filled in 3 hours when the 8 taps are opened.
