PROBABILITY-1

1. Determine the sample space for the experiment when the coin is tossed three times?
2. A coin is tossed 3 times. Find the probability of getting
   (a) Exactly one head (b) Exactly two heads (c) No head
   (d) At least one head (e) At most two heads
3. A coin is tossed 5 times one after the other. Find the probability of getting at least 2 heads?
4. In a simultaneous toss of 2 coins find the probability of getting
   (i) two heads is (ii) exactly one head (iii) least one head
5. Three coins are tossed. What is the probability of getting
   (i) At least 2 heads? (ii) At most two heads (iii) All are tails (iv) 1 head and 1 tail
   (v) Exactly 3 heads
6. 4 coins are tossed simultaneously find the probability of getting at least 1 tail?
7. When five coins are tossed simultaneously what is the probability at least 3 coins show heads as output?
8. When six coins are tossed simultaneously what is the probability that at most three coins show heads as output?
9. A dice is thrown 2 times, describe the sample space?
10. Two dice are thrown, find the probability of getting:
    (a) A doublet
    (b) Number on first dice is different from second dice
    (c) Sum is more than 10
    (d) Sum is 7 when the number on first dice is greater than number on second dice
6. Three dice are thrown, find the probability of getting same number in all the 3 dice?
7. Three dice are thrown. If A appears on the first dice, B appears on the second dice and C appears on the third dice. Find the probability of getting A<B<C?
8. In a simultaneous throw of two dice, what is the probability of getting a total of 7?
9. What is the probability of getting a sum 9 from two throws of a dice?
10. In a simultaneous throw of two dice, what is the probability of getting a doublet?
    (Doublet is nothing but in a both Dice We get the same number then it is Doublet)
11. Two dice are thrown simultaneously. What is the probability of getting two numbers whose product is even?
12. In a single throw of 3 dice, then find the probability of getting a total of 5?
13. When 3 dice are rolled together probability of the sum being more than 16 is?
14. One card is drawn from the well shuffled pack of 52 cards.
    (i)What is the probability of picking a red card?
    (ii)What is the probability of picking a Ace of Spades or the jack of diamonds.
    (iii)What is the probability that the card drawn is a ten or a spade?
    (iv)what is the probability that the card is either a king or a spade?
15. From a pack of 52 cards, two cards are drawn together at random.
    (i)What is the probability of both the cards being kings?
    (ii)The probability that one is a spade and one is a heart, is
    (iii) From a pack of 52 cards, two cards are drawn together at random.
    (iv)What is the probability of both the cards being kings?

CODEGNAN

(vi)The probability that one is a spade and one is a heart, is

16. From a pack of 52 cards, 3 cards are drawn together at random, what is the probability of all the cards are king?
17. 5 cards are chosen at random, find the probability of getting 5-card combinations out of a deck of 52 cards if each selection of 5 cards has exactly one king?

CODEGNAN
